

## Editorial – Showing & Teaching Stereoscopic 3D

Dear members,

Our chairman's impetus was strongly supported by a solid central team, two or three very active regional groups, and a few isolated enthusiasts, the SCF has embarked on an ambitious "back-to-school" program, which headline could be "Showing & Teaching how to take 3D pictures". The September events that we organized or contributed to are reported in this issue.

This program is not an end in itself. It is the basis on which we are building the future of our Club. Professionals and the general public must know that it is easier than they think:

- to see the 3<sup>rd</sup> dimension in stereoscopic or 3D images, whether old or modern;

- to create new ones just by looking at our "wonderful world", as Pierre Meindre and Pierre Saint-Ellier did for the Olympic and Paralympic Games, or from their imagination (with or without AI), like Christophe Dentinger.

We go to fairs, we contribute to exhibitions, we participate in regional, national or international events, we also share via our three communication tools:

- this Letter for current events and in-depth articles. Please remember that any contribution is welcome;

- the online site at [image-en-relief.org](http://image-en-relief.org), which is both a hub - where to go when you are interested in stereoscopy and 3D images- and a repository - where to find old and recent documents when you want to show, teach or learn. Ideally, you should be able to find there all the still pictures or videos that we can share. We are working on it;

- the Facebook page for ongoing discussions. Do not hesitate to post there anything coming to your reach or to your mind.

These three tools are the basis from which our members may develop personal or collective activities re. our common hobby. or passion. These activities feed themselves on short term issues while being part of the long history of our Club, past, present and future This, in the most diverse fields, with cultural, scientific or technical partners such as the Médiathèque du Patrimoine et de la Photographie, the Société Asiatique and the École Française d'Extrême-Orient, the Archives de la Manche, the Stéréopôle and, I hope soon, the Société de géographie.

Let's not forget key innovations like 3D capture with a smartphone, which opens up literally new continents to the "photo-explorers" we all are.

We are hoping, that you have enough time to read and enjoy this issue!

J
